Document 1: JP 10-277882 A (Minolta Co., Ltd.)

Claims 1, 6, and 7

Document 1 cited in the international search report discloses features such as one wherein, when generating machining data, raw material data that most closely defines a product model is selected from a raw material database by comparing size data present in raw material data registered in the raw material database to a size model for the product model. Turning is a machining technique so well known as to not require the listing of references, and when comparing raw material data to product data, using the shape or length of a product is nothing more than conventional practice. Thus, a person skilled in the art could easily conceive of using the above known technique and conventional practice with the invention disclosed in document 1.

Accordingly, the inventions set forth in claims 1, 6, and 7 do not involve an inventive step.

Claims 4, 5, 10, and 11

list in some order of priority, and the highlighted display of the candidate having the highest priority are techniques so well known in the technical field of data processing as to not require the listing of references. Thus, a person skilled in the art could easily conceive of using the above known techniques with the invention disclosed in document 1.

Accordingly, the inventions set forth in claims 4, 5, 10, and 11 do not involve an inventive step.
